

Claims

add
a4
1. Use of effectors of the cholinergic central nervous system for producing a preparation for treatment of non-anticholinergic delirium.

2. Use as claimed in claim 1, wherein the delirium is a postoperative delirium or a delirium during an internal disease.

3. Use as claimed in claim 1, wherein the delirium is caused by non-anticholinergic intoxication.

4. Use as claimed in claim 1, wherein the delirium is caused by substance withdrawal.

5. Use as claimed in claim 1, wherein the delirium is caused by hypoglycemic processes, especially hypoglycemic coma.

6. Use as claimed in claim 1, wherein the delirium is caused by resuscitation.
